2010

In the past especially in the year 2010 many kinds of animals were extinct and some of still living were endangered. The government made a new law that was saying that anyone who would kill an animal would answer for that. Also the behaviour of the animals changed. They weren't scared of people anymore.

On the contrary, they were living free, and they were tamed and fed by people. If they were not scared of people they also were not dangerous for them but they were friendly and calm. But not only the animals changed in the year 2010. Many other things changed too.

For many years a very big problem was plastic. The problem with plastic in the years before 2010 was that plastic was durable and degraded very slowly. In some cases burning it, could release toxic fumes.

However a couple of years before 2010 special recycling programs have started.

The biggest problem was that plastic recycling was difficult to automate.

The sorting of plastic waste was labor-intensive. White containers are usually made from a single type and colour of plastic, making them relatively easy to sort out.

A product like a cellular phone has a lot of small parts consisting of different types and colors of plastic and it is difficult to sort out.

Also research has been done on biodegradable plastics that could break down with exposure to sunlight.

Scientists have invented bacteria that can produce completely biodegradable plastic, but this material was expensive. After a few years it became cheaper and in the year 2010 it was very cheap and very popular. Summing up year 2010 was very different than the year before. It brought a lot of new inventions that changed our life and life of animals on our planet.

- Alicja Drzewiecka based on Wikipedia

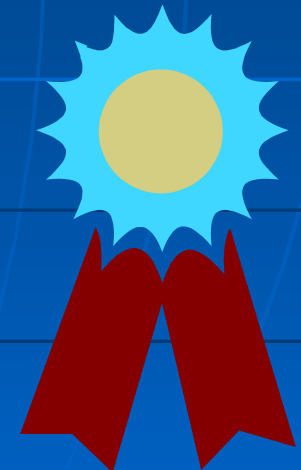

2014

In 2014 the ozone hole stopped getting bigger and it started getting smaller. It happened because people stopped producing plastic.

We could see big changes. The air was pure. The sky was blue and beautiful. People spent more time outdoors. The temperature rose and kept constant. More people felt much better. Residents of Earth were happy, hard working and friendly.

Initially, people found way to recycle plastic. People destroyed it and didn't damage the atmosphere. In this way they improved the situation of the ozone layer. But the removal of plastic had negative results, too. Vegetation withered and slowly the humankind didn't have anything to eat. People became dangerous and unpredictable. Animals were often sick and their mortality rate grew. People responded fast to this situation. They stopped destroying plastic but they didn't know what to do with it.

The authorities declared that:

„Anyone who will find a new way to recycle plastic and improve the Earth’s situation, will be given two rewards:

First - gratitude for ever and ever

Second – two thousand million dollars.”

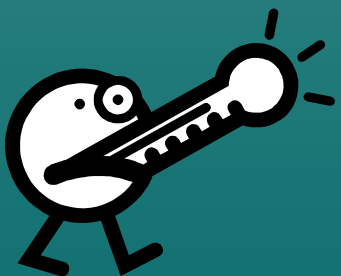

Every scientist tried to do it, but the invention took five months.

16th July 2014 Patrycjut Malinowski invented a new way to recycle plastic. A new, cheap material replaced plastic. This material didn't damage the environment

On November 15th, 2014 a new medicine was found to cure aids and cancer. A group of scientists worked on it for ten years. They conducted research on volunteers and found out that aids was connected with cancer.

That message helped to find a new medicine. The medicine included a lot of elements but the most important was a sample of cancer or the aids virus.

It was difficult, but they succeeded.
It took two years before they found the way. When it was published people were happy. Everyone was surprised. At first people didn't believe it but some volunteers tested the medicine and recovered. Residents of Earth finally believed in it.

2017

It is October 23rd 2017. We are in front of St. Lucas church in Poznan, where Mary appeared last month. Four people, who were praying at noon, saw smoke on the altar and after a while Mary appeared to them. She was wearing a white dress and a light was shining behind her.

The people were frightened and were about to run away, when Mary started talking to them. She said: „Do not be afraid. Listen to me, because what I'm going to say is very important. You must share it with other people. There shouldn't be homeless people on the streets and children in orphanages.”

„How should we do it?” - the people asked.
„There are families, that don't have enough
money to survive.”

Mary replied:

„Unemployed and poor people will find jobs
and they will be able to adopt a child or shelter
a homeless person.”

After Mary said it, the light was gone and she
disappeared.

After this event, people lives changed. There were no homeless children. The poor earned more and adopted one or two people to their families. After a few months, we interviewed one of the adopted children, a ten-year-old girl.

„Are you pleased with what happened?“ - we asked.

„Yes, I am. For the past 6 years I was waiting for a family to adopt me and take care of me. What happened is amazing! Mary made a miracle and helped thousands of people like me.“

„-We hope that your joy will never end.

-I hope so too.

-Thank you for the interview.”

As you can see, the world has changed and there are no longer lonely people. Mary has made a true miracle!!!

2026

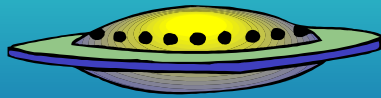

In 2026 UFOs lived on Earth and they wanted to have their own state. With this idea the UFOs representatives went to the world government. They chose our planet because the Earth was wonderful, free from problems and a good example for others.

After a long debate the members of the Earth's parliament, the senators and the president gave the UFOs their permission and they could build a new continent.

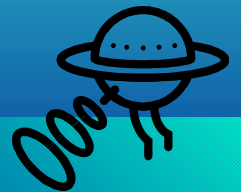

People all over the world voted for or against the new continent. Their opinion was: “UFOs can build their own continent”. UFOs were very happy, but they asked for permission to live under water. They didn't want to live on land. They didn't like the sun and hot days. The world government agreed.

The aliens finished building their underwater country in 2028. All buildings had an elliptical form, and the country was covered by a big glass cupola. The country was named Aqualand. Earthlings could take advantage of it and spend their free time and holidays underwater. There they could watch coral reefs, fish and other creatures, and observe underwater life.

One day a human and an alien wanted to have a child. Unfortunately, it was impossible.

So the scientist started to look for a solution. It wasn't difficult. Little human-alien babies lived in jars filled with water. When they were big enough, UFOs took them to their underwater home. The small human-alien babies were very well prepared for the underwater life. These children spent their winter holidays on the surface with their fathers or mothers from Earth and summer holidays under the water. Aliens and humans were getting on well.

FEATURES

HOUSES

Apartments and the style of decoration have changed a lot of. We don't have tower blocks or blocks of flats now. Families live in houses. Everyone wants to have a little privacy, a separate garden and a swimming pool. Poor people, who don't have enough money for a living and for their own home, live in luxurious apartments sponsored by the government. They get jobs and money for renovations, too.

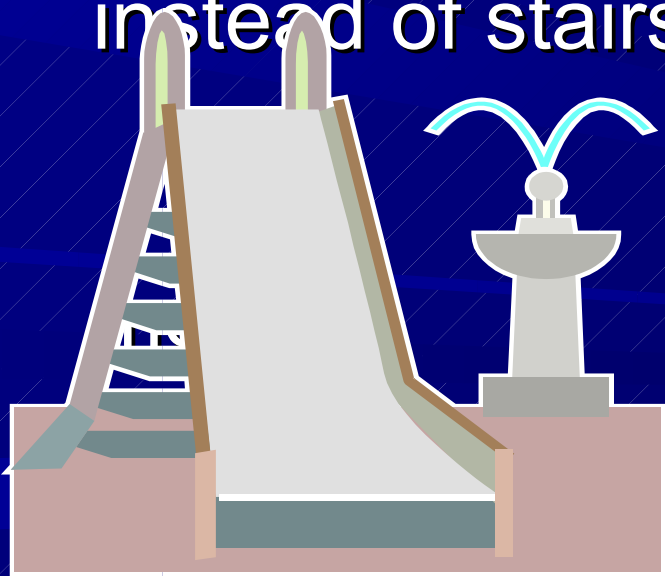

All trade centres are portable. They are under the water surface. Trade centres are in different places every day. People get there using special suction tubes.

There are spacious lifts with sofas and armchairs for comfortable journeys.

In 2010 people installed slides and lifts instead of stairs in their houses.

It is a faster and more comfortable way to from floor to floor.

Japanese style is very fashionable now all over the world. The rooms are decorated and adapted for the user in this style. Every kid must have Japanese toys. All furniture and decorations must be in three Japanese colours: red, white and black.

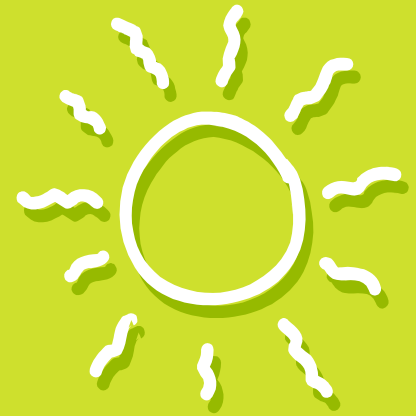

Hanna Świątnicka

WORK

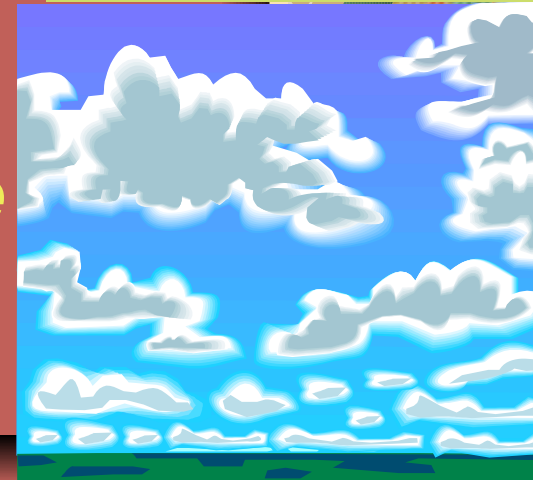

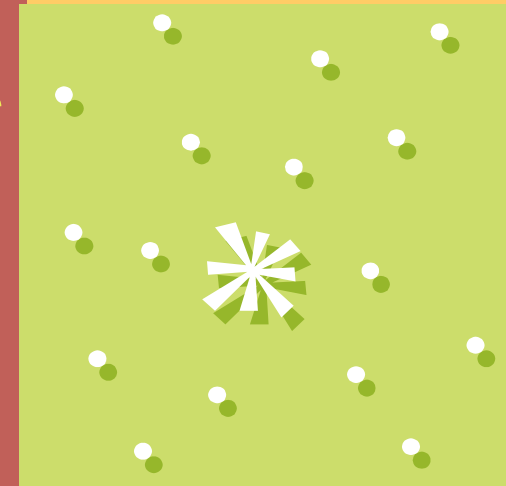

It's 2030. When people invented tablets which replaced food, a lot of people lost their jobs. Some people found work by demolishing factories, but a lot of people didn't have a job. A lot of people went back to school, because they wanted to produce the tablets too. They finished medicine schools. However food became cheaper so even more people didn't have anything to do. Most of the society somehow muddled through.

WEATHER

When in 2014 the ozone hole stopped getting bigger, the weather changed. Patrycjut Malinowski, who invented a new way to recycle plastic, rescued Earth from strong radiation, which was destroying our world. People lived happily, because the ozone hole disappeared.

Unfortunately, the perfect weather stopped in 2026, when the aliens arrived on Earth. They created their new home on our planet. They lived in an underwater country. When aliens and humans started having children together, the weather gradually changed. Children who lived in the underwater country couldn't breathe. The aliens decided to produce more rain and so the weather changed, because of the rain.

Marta Cybal

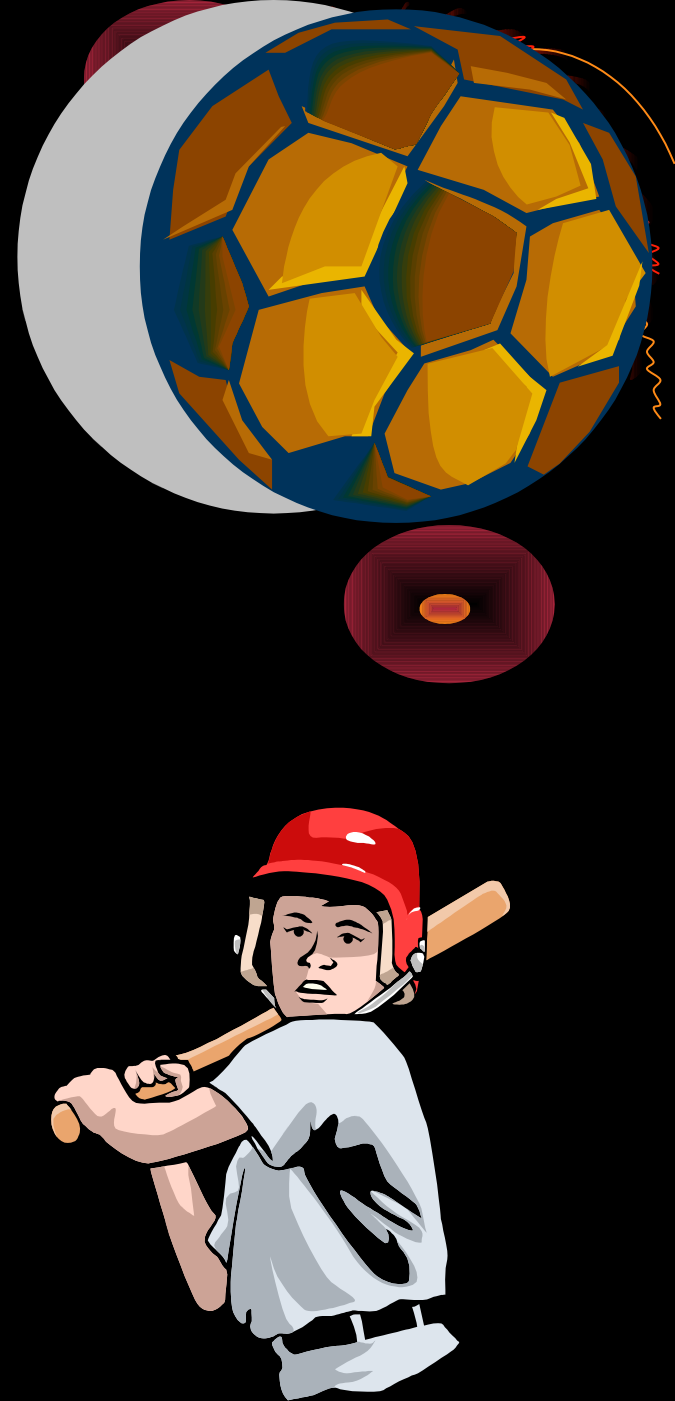

LEISURE AND SPORT

People on Earth had a lot of free time. They liked running. Everyone had lunch outside every day. We could see everything and everybody happy, beautiful and fresh. That was nice. The aliens underwater had little free time because they worked very, very hard. People played volleyball, basketball and football. Children weren't bored. Adults had a lot of time for their children.

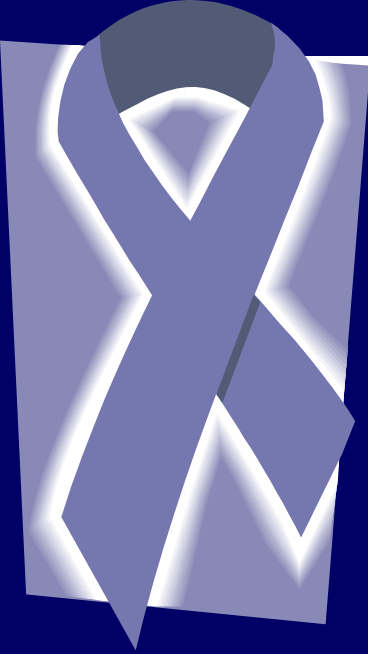

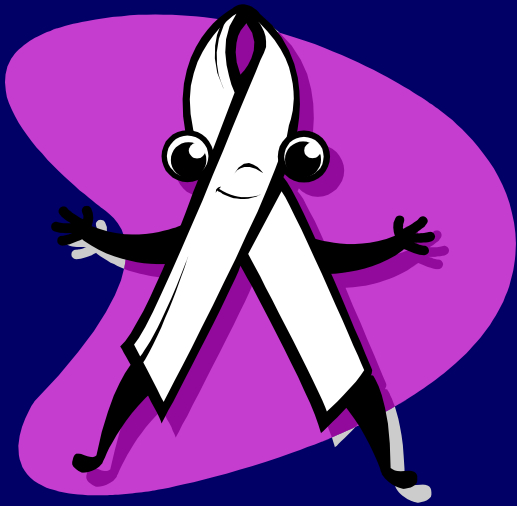

The aliens brought a new game: “Sweetball party”. The rules were easy: everyone stands in their places and throws a big candy ball. The winner gets a big candy and must eat it.

Hanna Świątnicka

HEALTH AND BEAUTY

In 2014 a new medicine was found to cure aids and cancer. Scientists found other medications and slowly people weren't sick at all. People were happy but there weren't enough workplaces and homes for them. Earth authorities built special estates for these homeless and unemployed. People had flats in exchange for work.

In 2026 aliens lived on Earth. They looked the same as people but they had big ears. The aliens were flat so they wore convex clothing. Humans accepted this way of dressing and they started a new fashion. The aliens brought a new cosmetic: a rejuvenating mask.

Women didn't have to be slim because being fat was fashionable.

In every house a bathtub with mud was installed because mud baths helped to firm skin.

H. Świątnicka, W. Peters, M.
Nowacka

FOOD

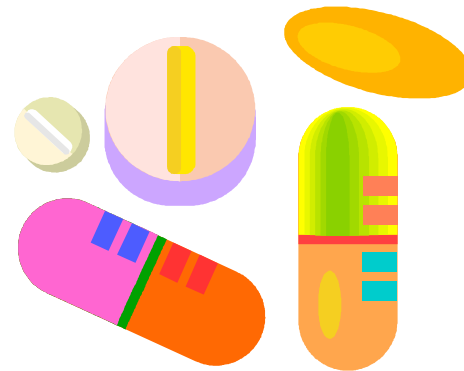

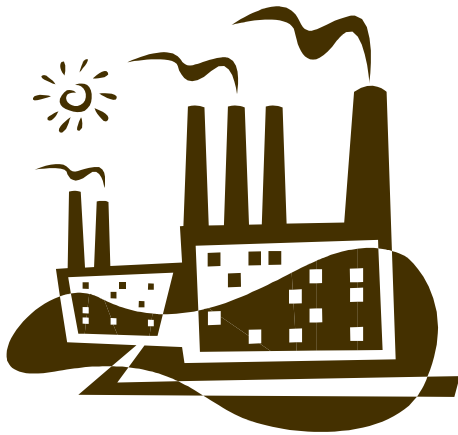

It's year 2030. When in 2014 a new medicine was found to cure aids and cancer, scientists tried to find new food. They worked a lot, and in 2015 they found tablets and a lot of new diets. Women stopped eating traditional food, because they ate tablets and they didn't have to eat anything else. As a result no food had to be produced, because people ate those tablets and they didn't feel hungry.

All fat people became slim, and there were only good-looking people around. Medicine achieved the impossible thing.

Since that time, everything has changed.

A lot of factories closed and a lot of people lost their jobs because of food tablets.

CLOTHES

It is 2030. Since 2010 our clothes have changed. We all started to wear electronic clothes with microchips in them. People buy their clothes online, so there aren't any shops in the towns.

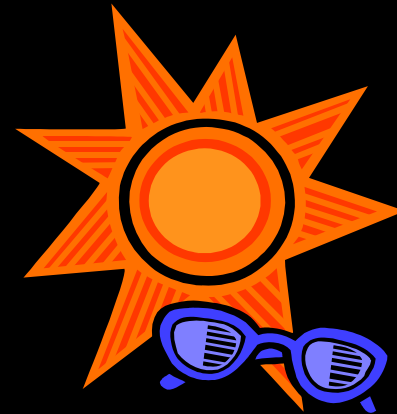

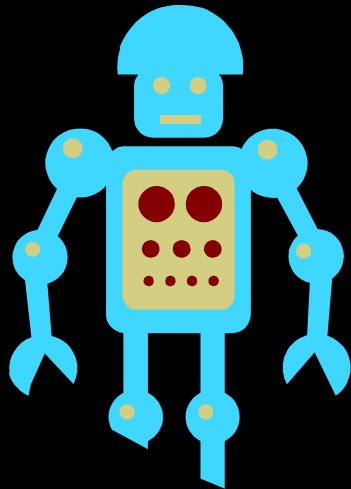

It is great because we don't have to stand in long queues or walk from shop to shop.

We can talk with our friends wherever we are,
because they wear electronic clothes too.

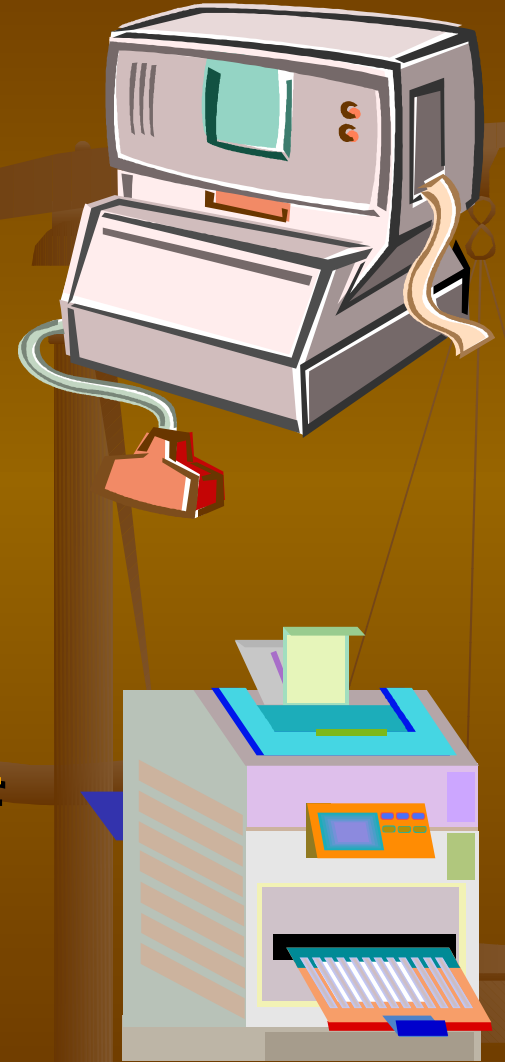

~~It is very cool to wear clothes protecting from
the strong sun.~~

Marta Cybal

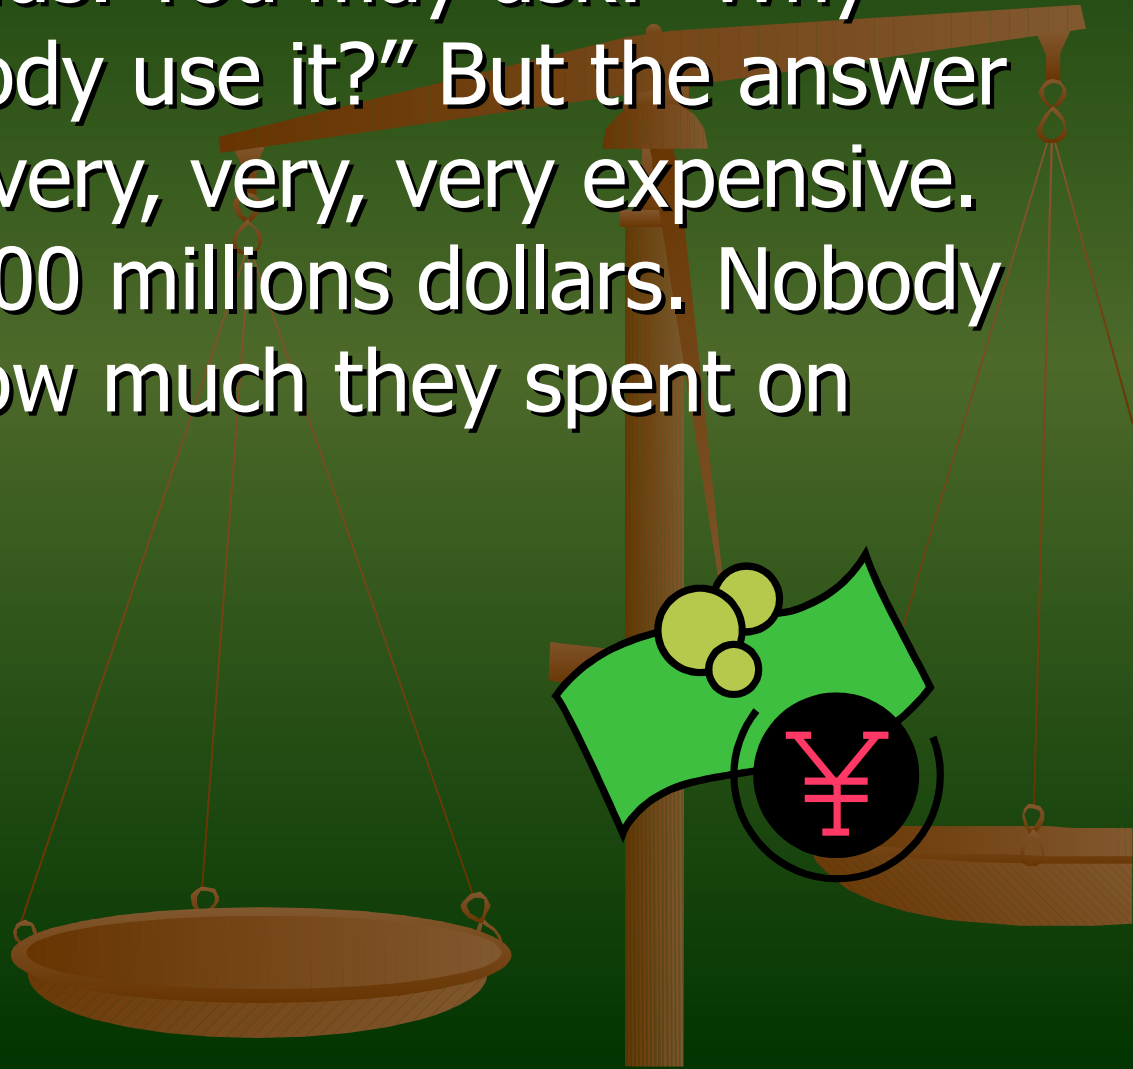

INVENTIONS

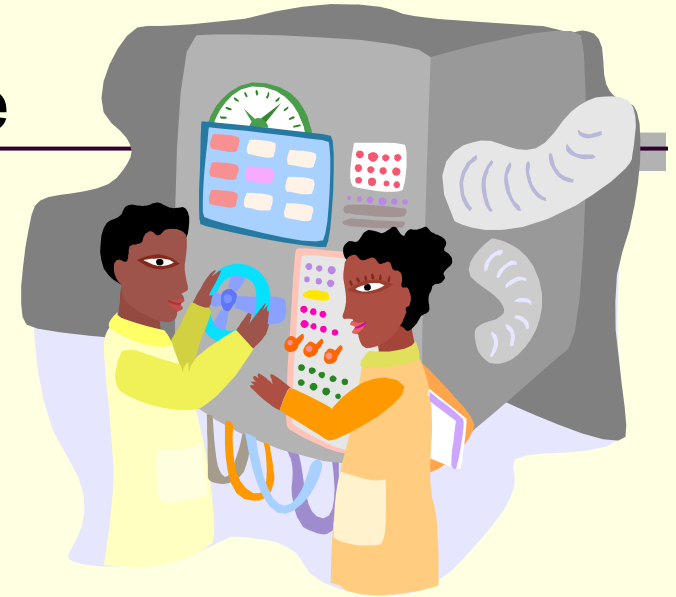

In 2015 Michelle Marguell invented a shaver. It can make people look younger, but it can't rejuvenate their interior! How the shaver works is shrouded in mystery. Mrs. Michelle doesn't want to betray her recipe for youth, but it really works! A lot of famous people used it. It subtracts 10 to 25 years.

How many years exactly? It depends on age and demands. You may ask: "Why doesn't everybody use it?" But the answer is simple - it is very, very, very expensive. It costs 50 to 300 millions dollars. Nobody wants to say how much they spent on their youth.

In 2020 Martellina Cybalung invented a beautiful, but a little strange thing: a machine counting hair. It is accessible for everyone, but it costs 5000 euro. The machine counts hair very carefully, checks its condition and structure and chooses suitable shampoo and conditioner. We can thicken our hair with this machine. In 2021 Martellina got the Nobel Prize in inventions category!

We have a new hit –
a portable machine making
money. Jaguelin Marce has
invented it this year. Its
creator has the only one
copy.

The machine produces real
Polish money with all the
needed signs. Its inventor
wants the machine to
produce every currency.
Jaguelin wants to sell his
prototype to a bank.

Hanna Świątnicka

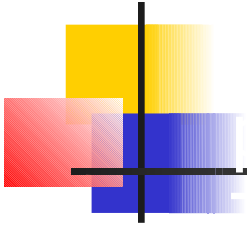

BELIEFS

It is year 2030. Since 2004 religion and beliefs have changed. Until the year 2017 a lot of people lost their faith and they didn't believe in God. They thought that He didn't listen to them, and that He didn't help them!

People separated into two groups: believers and non-believers. Unfortunately the non-believers were a bigger group. Everything changed in 2017.

Everyone got a job and nobody
was lonely.
Everybody converted to
Christianity.
Mary's words became true.

Unfortunately in 2026 a crisis came, because of the UFO that came down to Earth. They brought beliefs in the God of Sun and underwater life. People and the aliens started having children together and nothing could surprise anymore.

However, a year ago everything became normal and came back to the way it had been after 2017. People believe in one God although the aliens still live in their own underwater world.
